# Configuring the NetApp ONTAP Data Collector

Cloud Secure uses data collectors to collect file and user access data from devices. The data is provided to Cloud Secure for analysis.

## *Before you begin*

You need the following information to configure this data collector:

- An agent must be configured to collect data
- The SVM management IP address
- A user name to access the SVM
- The password to access the SVM

## *Steps for Configuration*

1. Log in as Administrator or Account Owner to your Cloud Secure environment.
2. Click **Admin > Data Collectors > +Data Collectors**

The system displays the available Data Collectors.

3. Click **+Monitor** in the NetApp ONTAP tile.

The system displays the Add Data Collector: Ontap SVM configuration page.

4. Enter a unique name for the collector
5. Select the agent that will be collecting the data
6. Enter the SVM management IP address
7. Enter the user name to access the SVM
8. Enter the password to access the SVM
9. Click **+Add Collector**

## *After you finish*

- Click **Admin > Data Collectors** to check the status of the collector you configured.

There is normally a delay before the collector status is displayed.
